EDUCATION

Hawassa University

BSc Computer Science

2021 - 2025

CGPA : 3.06 | Exit Exam : 78/100

SUMMARY

Equipped with strong skills in Full Stack Development, Programming, and Data Structures & Algorithms. Driven by a passion for building meaningful web applications, proven through developing several hands-on projects.

SKILLS

Frontend: React.js, Next.js, Tailwind CSS

Backend: Node.js (Express.js), MongoDB, PostgreSQL, PrismaORM, REST API, GraphQL

Framework & Languages: TypeScript, JavaScript, Python, PHP

Tools: Git, GitHub, GitHub Actions, Docker, Redux, Jupyter Notebook, Figma, Notion

Core Technical Strengths: Full Stack Development, Data Structures & Algorithms, API Integration, Problem-Solving

Soft Skills: Teamwork, Effective Communication, Time Management

PROJECTS

Pulse Connect (Next.js, TypeScript, Tailwind CSS, MongoDB) ↗

- Built a full-stack social networking platform with authentication, profiles, posts, comments, and follows using Next.js and MongoDB.
- Implemented real-time chat with Socket.io featuring live messaging, typing indicators, and online/offline presence.
- Developed a complete notification system for likes, comments, follows, and messages with instant realtime updates.
- Designed a modern, responsive UI using Tailwind CSS and ShadCN, including dark/light mode and a clean social layout.
- Optimized backend performance through efficient MongoDB schemas, secure password hashing, and reusable API routes.

Even Orbit — Full-Stack Event Booking Platform (Next.js, React, Tailwind, MongoDB) ↗

- Built a full-stack event discovery and ticketing platform using Next.js, TypeScript, Tailwind CSS, and MongoDB, enabling users to browse, filter, and explore events with fast server-side rendering.
- Developed reusable and scalable UI components such as Featured Carousels, Event Cards, Search & Filter Bars, and neon-glass UI themes, achieving a modern, responsive, and visually appealing UX.
- Implemented dynamic event pages and real-time date/location formatting, ensuring seamless navigation and responsive user interactions across devices.
- Optimized performance through component architecture, caching, and clean API data handling, improving load time, reducing redundancy, and enhancing code maintainability.
